

Engine Controls - Combination Switches

Situation: Switch malfunctions can cause a variety of safety issues, including non-functioning brake lights, headlights, tail lights, turn signals, hazard lights and wipers.

Solution: CARQUEST Advantage

Replace worn parts with quality, OEM-grade switches from CARQUEST. CARQUEST offers one of the industry's most extensive selections of exact-fit/exact-function switches for virtually any foreign nameplate or domestic model. And each switch is engineered to meet or exceed OE performance specifications.

Repair tips:

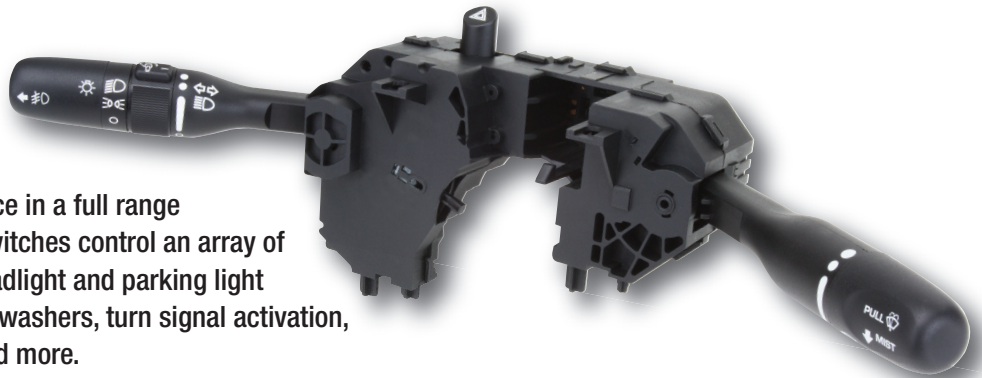

- Combination switches play an important role in ensuring driver safety, convenience and confidence in a full range of operating conditions. These switches control an array of important functions, including headlight and parking light operation, windshield wipers and washers, turn signal activation, cruise control, hazard warning and more.
- Because of their important role, switch quality is absolutely vital. While two replacement switches from different manufacturers might look alike, there are key quality differences that aren't easily visible. Each CARQUEST switch is manufactured from the OEM-preferred blend of nylon and glass filled plastic for exceptional strength, and includes premium copper/nickel/silver-plated electrical terminals to ensure robust electrical connectivity.

Features:

- Designed using semi-precious metal contacts
- Each switch subjected to rigorous testing processes
- Designed and built to OEM dimensions
- Complies with all federal motor vehicle safety standards
- Mounting and connectors identical to OE

Benefits:

- Superior switching operation
- Meets or exceeds OE switching specifications
- OE form, fit and function for precise fit and reliable operation
- Precise fit and size for ease of installation
- Increased customer satisfaction
- Comprehensive warranty
